Start of Screen <u>10</u>	Stop of Screen <u>16</u>
Casing Material (Select one)	PVC <input checked="" type="checkbox"/> Steel <input type="checkbox"/>
Pump Type (Select one)	Submersible <input type="checkbox"/> IndiaMarkII <input type="checkbox"/> AFRIDEV <input type="checkbox"/> Other <input checked="" type="checkbox"/>
Depth of Cylinder	<u>10</u>
Liters Per Minute	<u>120</u>
Health & Hygiene (Check if completed)	<input checked="" type="checkbox"/>

Identification of Problems

Please describe:

The present primary source of water is variable. There is an extremely small water catchment source about 500 meters away that may last another couple of weeks. Another 2 kilometers down the road is another water catchment, already turned green. They walk up to 12 kilometers to get "clean" water in 50 gallon drums that they roll back home.

People Served (Enter number of people, not families) 1,000

Final Well Construction

If 'No,' please explain:

Description

Please write a narrative description of the following:

GENERAL INFORMATION

It was a great experience at this well site. The children especially pitched in to help set up the drill. They actually took turns removing the cuttings from the circulation trough.

There are many small children as well, most of them barely clothed. None of them seem to have shoes. The thought of having to negotiate the accaia thorns makes you wonder how they get around.

The clean water will be a good beginning for a better life. Their health will improve and more of them will get to go to school.

TESTIMONIAL/EVANGELISM

The time of prayer here was special.

HYGIENE TEACHING

Women and children instructed on proper use of water.
